

PRODUCT SPECIFICATION

Recombinant anti-human CapG nanobody 7.

Catalogue number: sdAb-CapG-Nb7

Background

CapG is a typical F-actin capping protein, ubiquitously expressed, with particularly high expression in macrophages. Similar to gelsolin, it binds not only to G-actin but also to the fast growing barbed end of actin filaments, preventing further growth of the actin filament. The interaction requires calcium and is completely reversible by EGTA. CapG expression has been reported to increase in cancer cells.

Applications: PD, IP, ELISA (WB not determined). This product is for R&D use only, not for drug, diagnostic, therapeutic, household, or other uses.

Source and properties

CapG nanobody 7 was raised by immunizing a llama with full length human recombinant CapG. It binds to CapG with an **approximate affinity of 25 nM (determined by ITC), either in the presence or absence of Ca²⁺**. CapG nanobody 7 interacts with the second domain in CapG, unlike CapG nanobody 2 or 4. CapG nanobody 7 inhibits import of Cap G in a nuclear import assay with rabbit reticulocyte lysate, unlike CapG nanobody 2.

Availability: Nanobody 7 comes with a COOH-terminal HA or Myc epitope tag. Available in 100 µg, 500 µg, 1000 µg quantities. For bulk amounts, please inquire.

Expression host: VHH single domain antibody purified from *E. coli*.

Cross reactivity: Reactivity of this nanobody with CapG from other species has not been tested.

Storage buffer: 20 mM Tris-HCl pH 8.0, 150 mM NaCl, 1mM DTT, 60 % glycerol. Store at -20°C. The sample will not freeze. Maintain sample in cold environment during transport to increase longevity.

Stability: Store at -20°C upon arrival. For long term storage, aliquot and store at -80°C. Avoid repeated freeze/thaw cycles.
